

# Uber Interview Handbook

## 1. Company Overview

Uber is a global mobility platform, revolutionizing how the world moves. It is known for its complex distributed systems and high-scale engineering challenges.

## 2. Hiring Process (2025-2026)

- **Recruiter Call:** 30 mins.
- **Technical Phone Screen:** 60 mins (CodeSignal), 1-2 coding problems.
- **Onsite Loop:** 4-5 rounds:
  - **Coding Round (1):** Algorithmic problem-solving.
  - **Second Coding (1):** Depth in specialization or another coding round.
  - **System Design (1):** Focus on scale and Uber-specific challenges.
  - **Collaboration & Leadership (1):** Behavioral and project discussion.
  - **Bar Raiser (1):** External interviewer for cultural and technical bar.

## 3. Data Structures & Algorithms (DSA)

### Frequently Asked Problems

| Topic             | Problem Example                              | Difficulty  |
|-------------------|----------------------------------------------|-------------|
| Graphs            | Design a Ride-Sharing Map, Number of Islands | Medium/Hard |
| Arrays/Strings    | Two Sum, Product of Array Except Self        | Medium      |
| Hash Maps         | Implement an LRU Cache                       | Medium      |
| Sorting/Searching | Binary Search on a Rotated Array             | Medium      |

## 4. Machine Learning & AI

- **Michelangelo:** Knowledge of Uber's internal ML platform.

- **Geospatial AI:** Using ML for ETA prediction and route optimization.
- **Dynamic Pricing:** Designing algorithms for surge pricing and demand forecasting.

## 5. System Design

- **Uber-Specific:** Design a real-time map showing all drivers, Design a ride-matching system.
- **General:** Design Dropbox, Design a Chat App, Design a URL Shortener.
- **Focus:** High availability, low latency, and geospatial indexing (Quadtrees/H3).

## 6. Behavioral & Leadership

- **Collaboration:** “Tell me about a time you had a conflict with a teammate.”
- **Leadership:** “Describe a project you led from start to finish.”
- **Bar Raiser:** “Tell me about your most technically complex project.”

## 7. Online Assessment (OA)

- **Platform:** CodeSignal.
- **Format:** 2-3 coding problems in 70 minutes.
- **Focus:** Accuracy and clean, compilable code.

## 8. Preparation Tips

- Practice on CodeSignal: Get used to writing code that runs against test cases.
- Understand Geospatial Indexing: This is a core part of Uber’s engineering.
- Be prepared for the Bar Raiser: It’s the most critical round for leveling.
